Art Unit 2165

update terminal, and the schedule database storage device, said order of priority being determined in advance; and

an update data generation unit generating update HTML document data on the basis of the extracted update data, the generating unit updating the HTML document data with reference to the schedule data at the patrol timing, and at least one of the first and second update data is incorporated in the update HTML document data if the one of the first and second update data is searched and extracted as the extract data;

wherein the management update terminal is allowed to set the patrol time timing, patrol order, number of times patrol is to be carried out, and setting regarding whether or not to cause the patrol to be carried out, which determine the order of priority, and the home page management unit transmits an HTML document which contains the update HTML data generated by the update data generation unit to the user terminal.

2. (Currently amended) A system according to claim 1, wherein the update HTML document data contains banner advertisement data.

3. (Original) A system according to claim 1, wherein the reception process of a mail message includes a process for sending a mail transmission request to the mail server, and a reception process of a mail message from the mail server.

4. (Currently amended) A system according to claim 1, wherein the extraction process of update data of [[an]] the HTML document data stored in the home page database includes a process for reading out a latest first HTML document data and a second HTML document data having an update time a predetermined period of time before the current time from the home page database, and a process for extracting a mismatched data part of the first and second HTML document [[s]] data.

Serial No. 10/672,622
Art Unit 2165

5. (Currently amended) A system according to claim 1, wherein the file search process in the management terminal includes a process for sending a file search request to the ~~management~~ update terminal, and a reception process of an update file from the ~~management~~ update terminal.

6. (Currently amended) A system according to claim 1, wherein the ~~storage device stores~~ schedule database set with a predetermined cyclic period, and update data associated with the schedule database, and the search process of schedule data in the ~~storage device~~ schedule database includes a search process of update data associated with a schedule corresponding to the current time.

7. (Cancelled).
